Big Data, but local

Data: we have some.

Loads :
logs, xl files, real data, consumption, accounting, etc.

But :
Mainly underexploited, hard to get (proprietary, no automation)

Briefly said: mostly unexploitable

That must change !!!

And here I am....

Dig the mine !!!

Why ?
- (Also) Data driven management
- get the discrepancies, exceptions, trends
- Improvements : redundancy
- Authentic sources
- Open Data

Why are we here ?

How ?

- Method
- Consolidation
- Standards
- Tools (preferably free)
- Knowledge

This is a new job for us (and for me).
