

b-Part

The interdisciplinary project investigates novel concepts and solutions for citizen e-participation utilizing latest mobile device technology and appliances embedded in today's urban environments. The proposed pervasive participation approach will consider and study enabling, engaging, and empowering citizens with the ultimate aim of encouraging a continuous dialogue between a city and its citizens by using contemporary technology.

Results and expected impact

A mobile application was developed for citizens to propose own ideas and voice concerns related to urban planning and urban life by posting geo-referenced contributions. Within the living lab trial, city officials responded and gave feedback to citizens input but also received relevant insights to current plans themselves. The rich data set gathered through usage logs, two surveys and several interviews allowed a quite detailed analysis of various aspects impacting public participation, resulting in a comprehensive list of publications to conferences and journals. These results have been presented as recommendations for the design of future democratic innovations in the project end report.

Aim/objective

What are the requirements, opportunities, and impacts of implementing pervasive citizen participation concepts in urban governance?

Approaches/methods

- Develop a mobile participation prototype Participatory approach by involving citizens and city officials
- Iterative, interdisciplinary development based on user studies and experiments

Expected results and impacts

- Empirical results on testing novel ideas of mobile participation in practice
- Local contribution to improving dialogue between citizens and policy-makers

Living lab in the city of Turku

- Large-scale user-study with real planning and policy questions and (1000+) participating citizens in Turku, Finland
- Close cooperation with municipality, including designing the tasks and consulting the participatory policy process

b-Part – Building pervasive participation

Duration: 2013–2016
