Urban Europe Policy Brief

Policy recommendations for government use of social media for collaboration with citizens

Introduction

Government and institutional organizations at all levels, from the EU Council and European Commission to single municipalities, are increasingly using social media (SM) and social networking sites (SNS) (e.g. Facebook and Twitter) to communicate with and broadcast their information to their "citizens followers". Especially at the local level, governments use SNS to create a new channel for two-way communication and collaboration with citizens, engaging them in the design and delivery of policies in various domains. In doing so, governments face many challenges that undermine their own efforts and limit the potential and effectiveness of SNS to deliver improved communication and collaboration. Evidence from the

JPI SmartGov Project shows that most challenges relate to: guaranteeing privacy, data protection, accuracy and consistency of information; achieving integrated workflows between departments; identifying stakeholders to connect with; determining employees' code of conduct; defining clear roles and responsibilities (e.g. communication managers and data analysts).

This policy brief provides practical recommendations for governments, especially at the local level, to address these challenges and make effective use of social media for communication and collaboration. The recommendations are based on a relevant academic literature and interviews with the SmartGov Project pilot
