## Keeping Up the Pace: Information on Reporting and Monitoring

*Johannes Bockstefl, FFG*

# Transnational Reporting

- JPI Urban Europe developed an **implementation plan for programme and project monitoring** in 2019 which is used also in EN-UAC
- **Annual transnational project progress reports** are expected after 12/24/36 months (depending on project duration) including project survey questions  
→ submission via JPI UE **Online Project Monitoring System**: <https://ffg.countit.at>  
→ individual login credentials will follow for each project lead

## Project Information

### Abstract \*

The overall goal of WalkUrban is to come to a better understanding of local accessibility and urban walkability in order to free up the potential for walking. The project combines quantitative and qualitative methods through innovative analyses of objective, subjective and perceived walking accessibility as well as walking-related attitudes and travel satisfaction. It aims to identify key drivers for and obstacles to walking in different urban neighbourhoods. The research will be carried out in close collaboration with local stakeholders in three European cities (Genoa, Dortmund and Gothenburg). WalkUrban aims to improve data collection and analysis methods for exploring the links between objective, subjective and perceived accessibility. ICT-based tools will be adapted for the assessment of selected walking routes in relation to important amenities and public transport stops. Citizens and other stakeholder members can use the tools on hand-held devices like smartphones and can thus participate in the fieldwork by self-assessing the walkability of their neighbourhoods. The ultimate aim of the project is to identify local solutions for improving walkability alongside general recommendations in order to support walking as a zero-emission sustainable and active transport mode in urban areas
